Scope of Study

Important IAS
(Certificate level-
Accounting)

	The Conceptual Framework for Financial Reporting
IAS 1	Presentation of Financial Statements (soon to be replaced)
IAS 2	Inventories
IAS 8	Accounting Policies, Changes in Accounting Estimates and Errors
IAS 10	Events After the Reporting Period
IAS 16	Property, Plant and Equipment
IFRS 15	Revenue
IAS 33	Earnings Per Share
IAS 36	Impairment of Assets
IAS 37	Provisions, Contingent Liabilities and Contingent Assets
IAS 38	Intangible Assets

Accounting ???

Accounting is an art of **recording, analyze and summarizing** the **financial information** in a significant manner.

Recording refers creating journal entry for all transactions with debit and credit.

Analyzed & Classifying refers classifying all debit and credits into revenue/ capital nature along with Assets, Liabilities, Income, expenses.

Summarizing refers summarize all financial information into Financial Statements

Accounting ???

- Share holders
- Regulator
- Prospective investors
- Employee
- Other Stakeholders
- Customers

Accounting ???

User of Accounting Information

Accounting ???

Books of Accounts = Set of Financial Statements

- ✓ a statement of financial position – **Balance Sheet**
- ✓ a statement of profit and loss and other comprehensive income
- ✓ a statement of changes in equity
- ✓ a statement of cash flows for the period;
- ✓ notes, significant accounting policies and other explanatory information;
- ✓ comparative information – **as per standard**

Objective of Financial Statements

The objective of general purpose financial statements is to provide information about the financial position, financial performance, and cash flows of an entity that is useful to a wide range of users in **making economic decisions**.

Also shows **management stewardship** of resources entrusted to it, predicting **entity's future cash flow** – for potential investor.

Regulation of Accounting

→ Legislation

(The Companies Act 1994, BSEC regulation, The Bank Companies Act 1991, etc)

→ Accounting concepts & individual judgment

(Valuation, brand value, reputation – judgement may vary)

→ Accounting Standards

(IAS, IFRS) ifrsbox and iasplus

→ Commonly used accounting practice

(UK GAAP, US GAAP- companies act, IAS, statutory requirement, listing rules)

→ True and fair view/ fair presentation

(Fundamental QC: Relevance & Faithful presentation)

Sustainability standards

The ISSB was formed by the IFRS Foundation in 2021 with responsibility for developing a set of sustainability disclosure standards (IFRS Sustainability Disclosure Standards) which will complement the existing IFRS Standards

The aim of the IFRS Sustainability Disclosure Standards is to provide high-quality, transparent and comparable information relating to sustainability in financial statements and sustainability disclosures which are focused on the needs of investors and the financial markets.

The aim is to provide the users with the information they require to understand the entity's environmental, social and governance risks and its responses to them

The intention is for the ISSB to cover a range of environmental, social and governance (ESG) sustainability topics on which investors want information. It will begin with the climate-related disclosures due to the urgency regarding climate-related matters.

No IFRS Sustainability Disclosure Standards have been issued yet

IESBA Code of Ethics for Professional Accountants - fundamental principles

The International Ethics Standards Board for Accountants (IESBA) develops ethical standards and guidance for use by professional accountants. The IESBA code applies to all professional accountants, whether in public practice, in business, education and the public sector. It serves as the foundation for codes of ethics developed and enforced by member bodies. The IESBA Code of Ethics for Professional Accountants describes five fundamental principles of professional ethics that accountants must adhere to. These are:

- **integrity.** A professional accountant should be straightforward and honest in all professional and business relationships.
- **objectivity.** A professional accountant should not allow bias, conflict of interest or undue influence of others to override professional or business judgements.
- **professional competence and due care.** A professional accountant has a continuing duty to maintain professional knowledge and skill at the level required to ensure that a client or employer receives competent professional service based on current developments in practice, legislation and techniques. A professional accountant should act diligently and in accordance with applicable technical and professional standards when providing professional services.
- **confidentiality.** A professional accountant should respect the confidentiality of information acquired as a result of professional and business relationships and should not disclose any such information to third parties without proper and specific authority unless there is a legal or professional right or duty to disclose. Confidential information acquired as a result of professional and business relationships should not be used for the personal advantage of the professional accountant or third parties.
- **professional behaviour.** A professional accountant should comply with relevant laws and regulations and should avoid any action that discredits the profession.

Principles-based system

Advantages of a principles-based over a rules-based system of ethics

A principles-based system places the **onus on the individual** to actively consider independence for every given situation, rather than just agreeing a checklist of forbidden items. Even if something is not expressly stated in the guidance, professional accountants are required to follow the spirit as well as the letter of the guidance.

A principles-based system **prevents individuals interpreting legalistic requirements narrowly** to get around the ethical requirements. There is an extent to which rules engender deception, whereas principles encourage compliance.

A principles-based system **allows for** the variations that are found in every **individual situation**. Each situation is likely to be different.

A principles-based system can accommodate a **rapidly changing environment**, such as the one that professional accountants regularly face.

A principles-based system **can contain prohibitions** where these are necessary as safeguards are not feasible.

Qualitative Characteristics of Financial Information

→ Fundamental QC:

- Relevance
 - Predictive value: input to predict future outcome
 - Confirmatory value: feedback for previous evaluation
- Faithful representation
 - Complete (QC 12): includes all information
 - Neutral (QC 13): without bias
 - Free from errors (QC 14)

→ Enhancing QC:

- Comparability: enable to identify similarities in & diff among
- Verifiability: direct & indirect
- Timeliness

Capital and Revenue Expenditure

Capital Expenditure

is the expenditure where the benefits are not fully consumed in a year but spread over **several years**.

example:

- Land & Building
- Machinery
- Equipment
- Advance, prepayments etc

Capital and Revenue Expenditure

Revenue Expenditure

is the expenditure which provides benefits in the **current accounting year only**. It can not be forwarded to next year or years.

example:

- Salary expenses
- Rent
- Electricity
- Depreciation-**is a revenue expenditure!!!!!!**

Capital and Revenue Income

Capital

From sale of non- current assets.

Revenue

- Sale of trading assets
- Services
- Interest & dividend from business investment

Balance Sheet

Statement of Financial Position, also known as the Balance Sheet, presents the financial position of an entity at a given date. Comprised following three elements:

- **Assets:** Something a business owns or controls (e.g. cash, inventory, plant and machinery, etc)
- **Liabilities:** Something a business owes to someone (e.g. creditors, bank loans, etc)
- **Equity:** Represents the amount of capital that remains in the business after its assets are used to pay off its outstanding liabilities. Equity therefore represents the difference between the assets

Assets

Liabilities

Equity

Balance Sheet

Assets- recognition:

An assets is recognized in the BS when it is probable that the future economic benefit will flow to the entity and asset has a cost or value can be measured reliably.

Liability- recognition:

A Liability is recognized in BS when it is probable that an outflow of resources embodying economic benefit will result from the settlement of a present obligation and the amount at which the settlement will take place can be measured reliably.

Balance Sheet

Current assets:

- Expected to be realized/ intended to sale/ consume – normal operating cycle;
- Holds – purpose of trading;
- To be realized within 12 months;
- Cash & cash equivalent

Inventory
Trade & other receivable
Cash

Non- Current assets:

Expected to be recovered/ settled over more than one accounting year.

Property, plant & equipment
Intangible non- current assets
Long term investment

Balance Sheet

Current liability:

- Expected to be settle – normal operating cycle;
- Holds – purpose of trading;
- To be settled within 12 months;
- Does not have unconditional right to defer 12 months

Short term borrowing
Trade & Other payable
Accrued cost

Non- Current liability:

All other liabilities under non- current.

Bank loan
Long term borrowing

Income Statement

A record of income recognized and expenses incurred over a given period.

Entity's financial performance over a period of time.

Income:

is increases in economic benefit

- inflow
- enhancement of assets
- decrease of liabilities

resulting increases in equity.

Expenses:

is decrease in economic benefit

- outflow
- depletions of assets
- incurrences of liabilities

resulting decreases in equity.

Statement of Cash Flow

Presents the movement in cash and bank balances over a period. The movement in cash flows is classified into the following segments:

Operating Activities: Represents the cash flow from primary activities of a business.

Investing Activities: Represents cash flow from the purchase and sale of assets other than inventories (e.g. purchase of a factory plant)

Financing Activities: Represents cash flow generated or spent on raising and repaying share capital and debt together with the payments of interest and dividends.

Statement of Changes in Equity

Details the movement in owners' equity over a period. The movement in owners' equity is derived from the following components:

- Net Profit or loss during the period as reported in the income statement
- Share capital issued or repaid during the period
- Dividend payments
- Gains or losses recognized directly in equity (e.g. revaluation surpluses)
- Effects of a change in accounting policy or correction of accounting error.

The Accounting Equation

**Luca Pacioli
Developer of
Double-Entry
Accounting,
c1494**

According to Pacioli, “ Double-entry accounting is based on a simple concept: each party in a business transaction will receive something and give something in return. In accounting terms, what is **received is a debit and what is **given is a credit**. The T account is a representation of a scale or balance.”**

Double Entry Accounting System

- Based on principle of **dual aspect** of each transaction
- For correct presentation **both of them should be recorded**
- Requires maintenance of records of **assets, liabilities, revenues and expenditure**
- **Impact of each transaction** can be seen or measured
- Total assets are equal to total equities.

Expanded Accounting Equation

“ The basic accounting equation can be expanded to include all **five financial categories** indicating what has been received and given.”

**Net Income
is part of
owner's
equity**

Normal balances — assets and liabilities

Debit
Credit

Revenues and Expenses

The Accounting Equation

$$\text{Assets} = \text{Equities} + \text{Liabilities}$$

ABC started business with capital Tk. 100,000 in cash.

$$100,000 = 100,000 + 0$$

Equipment cash : Tk.20,000, Deposited Bank: Tk.5,000, Purchase raw materials

$$(100,000 - 20,000 + 20,000 - 5,000 + 5,000 - 2,000 + 2,000) = 100,000 + 0$$

Goods costing Tk 2000 sold for Tk. 5,000

$$(100,000 - 2,000 + 5,000) = (100,000 + 3,000) + 0$$

Purchase in credit: Tk. 1,000, Bank Loan: Tk. 5,000

$$(103,000 + 1,000 + 5,000) = (100,000 + 3,000) + (1,000 + 5,000)$$

The Accounting Equation

Transaction	Assets	=	Liabilities	+	Capital	Differnece
1. Owner's investment	20,000	=		+	20,000	-
2. Loan from bank	30,000	=	30,000	+		-
3. Purchased printers	1,000 (1,000)	=		+		-
4. Service revenue for cash	500	=		+	500	-
5. Service revenue on account	750	=		+	750	-
6. Supplies on account	200	=	200	+		-
7. Repair of equipment		=	400	+	(400)	-
8. Owner's withdrawal	(5,000)	=		+	(5,000)	-
9. Payment of loan	(10,000)	=	(10,000)	+		-
10. Collection of accounts	750 (750)	=		+		-
Balance	36,450	=	20,600	+	15,850	-

Accruals concept

The Accrual (or matching) concept requires that revenue earned is matched with the expenses incurred in earning it.

(recording revenues:

when they are earned and not when they are received in cash, and

recording expenses:

when they are incurred and not when they are paid)

Under Accrual basis of Accounting, an entity recognizes items as assets, liabilities, equity, income and expenses, when they **satisfy the definition and recognition criteria** for those elements in the framework.

Cash basis accounting:

is the practice of recording revenues when cash is received and recording expenses when the expense is paid.

True and fair view

True and fair view means that the financial statements are free from material misstatements and faithfully represent the financial performance and position of the entity.

The financial statements must "present fairly" the financial position, financial performance and cash flows of an entity. Fair presentation requires the faithful representation of the effects of transactions, other events, and conditions in accordance with the definitions and recognition criteria for assets, liabilities, income and expenses set out in the framework.

Going Concern

The Conceptual Framework notes that financial statements are normally prepared assuming the entity is a going concern and **will continue in operation for the foreseeable future**.

When entity does not prepare FS on a going concern basis, it shall disclose the fact, together with the basis on which it prepared FS & reasons why the entity is not regarded as going concern.

Going Concern

Major Going Concern problems:

- ✓ *Deteriorating liquidity position* - without financing arrangements.
- ✓ *High financial risk* - vulnerable to delays in payment of interest and loan principle.
- ✓ *Significant trading losses* - several years.
- ✓ *Aggressive growth strategy*- not backed by sufficient finance which ultimately leads to over trading.
- ✓ *Increasing level of short term borrowing and overdraft*- not supported by increase in business.
- ✓ Inability of the company to maintain liquidity ratios.
- ✓ Serious litigations faced by a company.
- ✓ Internal matters – work stoppage, labor difficulties etc
- ✓ Bankruptcy of a major customer of the company.

Materiality

Information is material if omitting it or misstating it could **influence decision** that users make on the basis of financial information about a specific reporting entity.

Financial Statements Vs Financial Reporting

Financial statements: included in the **complete set** of general purpose financial statements or a complete set of general purpose financial statements.

Financial reporting: encompasses a **much broader and detailed definition**, included financial and economic data for external parties.

Both the financial report and the individual statements play a role in creating the annual financial data report that investors and shareholders read as part of their financial research.

Departure from Accounting Standard

An entity may need to produce financial reports which do not comply with a specific accounting standard, if compliance with the standard would be so misleading they do not provide useful information to users, and the financial statements would no longer be fairly presented.

Must disclose:

- management has concluded that the FS present fairly the entity's financial position, financial performance and cash flows;
- complied with applicable standards and Interpretations, except the specified departure to achieve a fair presentation;
- the title of the standard or interpretation from which the entity has departed, - the nature including the treatment that the IAS/ IFRS would require, the reason why that treatment would be misleading, and the treatment adopted; and
- the financial effect of the departure on each item in the FS that would have been reported in complying with the requirement.

Departure from Accounting Standard

Banking industry:

- Presentation of Financial Statements
- Revaluation Gain
- Provision for loans and advances
- Repo Transaction
- Financial Guarantee
- Cash & Cash equivalent
- Non- Banking Assets
- Intangible Assets

Process of Accounting Record

Transaction

A transaction is a business event that has a monetary impact on an entity's financial statements, and is recorded as an entry in its accounting records.

Process of Accounting Record

Transaction

Analyze & classify

Major consideration:

- Documentation
- Necessary approval
- Cash
- Accrual
- Transfer
- Nature - revenue/ capital
- CoA of organisation

Process of Accounting Record

Transaction

Analyze & classify

Journal- GL

A journal entry is the record of a financial transaction recorded (entered) in a journal.

A journal details all the financial transactions of a business and which accounts these transactions affect
